INTRODUCTION

This task O3/A1 “*IT production of Online Educational Resource*” is included in the Intellectual Output 3 developed for the BIMstone project.

An Open Educational Resource (OER) has been designed and produced to support the implementation of the produced BIMstone Course and BIMstone Multimedia Cards. This makes available for free on the project’s website for being used as a supporting material in the numerous architecture, construction and heritage courses distributed within the sector of stone products.

The design of the contents of the didactic tools, the website and the resource centre are the main tasks of the project and, therefore, have required the special involvement and contribution of all partners.

The results of all validation tasks of partners and experts have been implemented in the development of this product, with the aim of achieving a final result with the highest quality and practical utility.

The platform includes all the materials developed in the Project.

In addition, the platform includes a private area, where users can upload information, validated by the members of the consortium, to update and complete the information developed in the project.
